

## DNC 600S

The DNC 600S numerical control is intended specifically for sheet-metal bending.

Depending on the software installed, it will be used on synchronized or conventional press brakes with mechanical or hydraulic end stops.

The DNC 600S is a competitively-priced product in a robust panel or box-design construction. It is a high integration of functions fitted out with a vivid high-contrast monochrome screen and a simplified keyboard with large keys.
